

Specialized Terminology

0:00	Owl: Welcome to Specialized Terminology, an instructional video on reading comprehension brought to you by the Excelsior College Online Writing Lab.
0:12	Every subject and discipline has its own unique vocabulary or set of words for talking about its topics.
0:18	We call this specialized terminology.
0:22	For instance, in the subject of anatomy and physiology, one set of specialized terminology has to do with the directional terms for locations on the body.
Displayed on screen	Teacher: Which part of the body is superior to the neck? Student: The head!
0:30	Owl: By using this specialized terminology, medical practitioners and students can have a common language for talking about locations on the body.
0:38	Hence, specialized terminology is useful because it provides an effective way to communicate information within a particular field of study.
0:46	It's always a good idea to look up the definition of specialized terminology.
0:50	Since textbooks are full of specialized terminology, they usually provide definitions either in the body of the text or in a glossary of key terms.
1:00	For other kinds of text, you should consult a dictionary whenever you encounter a term you don't recognize.
1:05	For instance, the word "id" is a specialized term used in psychology.
1:10	The id is the part of the mind in which innate instinctive impulses and primary processes are manifest.
1:17	Once you find the definition, it's a good idea to try out the new word in a sentence:
1:21	It's very likely that the prevalence of zombies in pop culture is an expression of fear and anxiety originating from our collective id.
1:30	This will help you to understand and remember it better.
1:34	Finally, it's also a good idea to keep track of all the specialized terminology for a specific course, subject, or discipline by creating a Terminology Chart.
1:44	A terminology chart has three sections:
1:48	a section for new terminology;
1:50	a section for word parts commonly found in the new terminology, which will help you to identify patterns;
1:56	and a section for frequently used acronyms.
2:00	An acronym is an abbreviation formed from the initial letters of other words.
2:05	For example, let's say you're taking a course on American Government.
2:09	Your terminology chart might have the following items under new terminology; prefixes, roots, and suffixes; and acronyms.

Displayed on screen Terminology Chart (See below the transcript for the complete chart.)

2:21	With a terminology chart, you can master specialized terminology for your courses.
2:25	This will help you do better on exams and papers!
2:31	Thanks for listening to this instructional video on Specialized Terminology!
